

Growth for TSGE

www.TSGEurope.com

Regulatory excellence for the chemical and associated industries

TSGE, the European consultancy group, has grown rapidly over the past year, expanding its UK team from 14 to 24 people.

As a leading European consultancy, we provide regulatory advice and technical support to companies wishing to acquire and maintain registrations of chemical products across the EU.

Demand has increased for our regulatory services in general chemicals (REACH), agrochemicals, biocides, animal health, cosmetics/personal care products, food/feed additives and food contact materials.

Our successful growth is attributable to our recognised expertise in the areas of human health, environmental fate and behaviour, ecotoxicology, physical and analytical chemistry and efficacy.

As a regulatory consultant, David Osborn, previously with Chemtura Europe Ltd, is amongst our latest recruits. David brings a wealth of industry knowledge and is responsible for several industry consortia management and risk assessment-based projects. Other new recruits include regulatory scientists, all with high academic qualifications and industry experience.

With established offices in the UK and Spain, TSGE is at the forefront in delivering a quality regulatory and registration service.

TSGE is part of the TSG group of consulting companies including Technology Sciences Group Inc. based in Washington DC and is a subsidiary of the law firm McKenna Long & Aldridge LLP.
